

Gel Clean

Viscous Hard Surface Detergent Gel

Powerful cleaning action yet
mild on skin

Easy to dilute and mix

Easy to apply to any surface

Provides good cleaning action
on rough surfaces

Non toxic and biodegradable –
Safe to use and low
environmental impact

Introduction

Gel Clean is an alternative concept in heavy duty cleaning. Rather than rely on chemical muscle from high caustic content etc, Gel Clean utilizes its ability to provide a viscous film over soils to allow increased contact time. The high wetting agents in Gel Clean have increased time to penetrate soils, allowing difficult areas to be cleaned without high mechanical energy inputs. Gel Clean is an excellent alternative for cleaning building exteriors, particularly where render is present, as it provides the cleaning power without the risk of render damage from high pressure cleaning. Gel Clean is simple to dilute and easy to apply, making it a good choice for small jobs or hard to reach areas. Gel Clean is economical as what is sprayed onto the surface stays on the surface. No losses through runoff.

Directions for use

Dilute Gel Clean 1 part to 9 parts water. Stir to mix then apply through a low pressure spray system. Pump up garden sprayers are ideal for small areas or difficult to reach areas.

All Gel Clean to soak into soils for 10-15 minutes, then pressure wash or hose off with clean water

Safety

This product is not considered as hazardous, however it is recommended that care be taken to avoid release to the waterways

Pack Size

3x5lt

Dilution Rate

1:9
