

Rinse Aid

Drying & Spot Free Rinse

Concentrated formula

Streak free finish

Easy to use and economical

Helps control water scale

High Gloss Finish

Introduction

Rinse Aid is a fully formulated additive for use in the rinse cycle of commercial machine dishwashers to improve the drying time of all items processed. Rinse Aid also has additives included to help prevent scale from forming in the machine and on washed items. Rinse Aid does not contain any perfumes that may affect the final acceptance of dishes and cutlery.

Directions for use

Use Rinse Aid as supplied connected directly to the machine dispensing system, or in the case of under bench models, added directly to the rinse aid section of the dishwasher. Typical starting concentrations are from .02% to 0.05%. Ensure rinse water temperatures are correctly set to 80-90 C for best results.

Safety

This product is considered to be very safe for use, and of low impact to the environment
